

The audience rule

Organize by reader and decision, not by dataset. A chart that serves no decision moves to an appendix or is cut.

Reader	Cadence	Decision	Core Views
CRO · CFO · Board	Monthly	Are we on plan? Why did ARR move?	ARR bridge, NRR / GRR, bookings vs plan, commit burn
Sales leadership · RevOps	Weekly	Will we hit the quarter? Where is pipeline at risk?	Coverage vs quota, forecast movement, slips, stage conversion
Deal Desk · Order Mgmt	Daily	What do I fix today?	Exception worklist: won without order, quote ≠ order, off-process invoices
Finance · Rev Accounting	Month-end	Do bookings, orders, and billings tie out?	Reconciliation, unbilled and under-billed, collections aging
Data team · Stewards	Continuous	Can anyone trust these numbers today?	Freshness SLAs, test status, incidents vs backlog, match review queue

Four canon rules

One idea per author. When two rules conflict, the one closer to the reader's decision wins.

TUFTE · THE VISUAL DISPLAY OF QUANTITATIVE INFORMATION

Every mark is data.

Erase ink that isn't data: borders, heavy gridlines, fills, 3D. Prefer small multiples to one crowded chart. Label in place, not through a legend. Tables when the reader looks up a value; charts when they need the shape.

KNAFLIC · STORYTELLING WITH DATA

The highlight carries the point.

Declutter until one highlight remains, everything else gray. Give context — who, what, compared to what — before detail. Knaflic writes the finding into the title of a slide read once; a dashboard is re-read as the data moves, so here the title names the chart and the design shows what matters. The why is written by the metric's owner, with a name and a date.

WARE · INFORMATION VISUALIZATION

Pop-out is reserved for meaning.

Position and length carry quantity. Hue marks status or at most four categories; lightness carries magnitude. One thing per view gets to pop out, so the eye finds it before it reads.

ALEXANDER · FP&A AND PERFORMANCE MANAGEMENT

No number without a comparison.

Every KPI shows plan, prior period, or forecast, and its variance is explained by drivers. A metric exists only if it has an owner and a decision, and it is defined once, in the glossary.

House rules

Where the canon is silent, these settle it.

01

One period per page

Stated in the header. Month-to-date is labeled MTD and never sits beside a closed month unmarked.

02

Trust is visible

Freshness sits at the top of every page. Every metric links to its definition.

03

Color by meaning, not sign

Revenue down is unfavorable; cost down is favorable. Green and red describe the business, not the arithmetic.

04

Numbers line up

Tabular numerals, one currency format per page, signed deltas. Zero is \$0 or —, never −\$0.0M.

DON'T

ARR by Segment

Legend lookup, four competing hues, a frame and grid that outweigh the data.

DON'T

No period, no comparison. The green arrow colors the sign, so it can't say whether \$128.6M is good.

DO

ARR by segment, January to August

Descriptive title, one highlight, context in gray, labels at the line ends. The eye lands on Enterprise before the title has to say so.

DO

Period named, the verdict vs plan directly under the number, last month as muted context. ARR grew, but growth short of plan is unfavorable: the color follows the verdict, not the arithmetic sign.

Structure

Ground, text, and the ink of everything that isn't the point. About 90% of any page.

					
Paper	Wash	Sounding line	Depth gray	Ink, muted	Chart ink
#FFFFFF	#F4F5F6	#D9DCDF	#9AA1A8	#5B646C	#1B2126
Ground	Selected row, code	Rules, gridlines	Context data ink	Labels, captions	Text, values

Focus + status

Navy highlights the one series that matters. Status colors carry verdicts only, never categories.

			
Deep water · focus	Channel green	Beacon amber	Buoy red
#1F3A5F	#2F7D5B	#B7791F	#B23A32
One per view. The line, bar, or number the reader's question is about.	Favorable · PASS	WARN · near threshold	Unfavorable · ERROR

Categorical

Only when categories must be told apart. Assign in order; four is the ceiling. Five or more means small multiples.

				No reds or greens in the categorical set: those hues belong to status, so a category can never be misread as a verdict. Sandbar and magenta separate from the blues by lightness and hue for common color-vision deficiencies.
1 · Deep water	2 · Harbor blue	3 · Sandbar	4 · Datum magenta	
#1F3A5F	#5B8DB8	#C2A878	#8E5A8A	

Ramps

Lightness carries magnitude. Diverging is for variance against a reference, centered on "on plan." Red and green always travel with a sign or label, never color alone.

Sequential · lessmore

Space & grid

A 4px base. Tight inside a group, generous between groups, so proximity does the work a border would.

Scale

Nine steps. Anything off-scale is a bug.

Page grid

1440 canvas, 160 margins, 1120 content, 12 columns, 24 gutters. Charts span 6 or 12; KPI tiles span 3.

Numbers & dates

One way to write each kind of value, everywhere: tiles, tables, tooltips, and exports.

VALUE	WRITE	NEVER	RULE
Currency ≥ \$1M	\$128.6M	\$128,600,000 128.6M	One decimal. Same unit for every number on the page.
Currency < \$1M	\$842K · \$612	\$0.8M 842.0K	K below a million, whole dollars below a thousand.
Negative	−\$2.4M	−\$2.4M \$ −2.4M	True minus sign (U+2212). Parentheses only in Finance exports.
Zero · not applicable	\$0 · —	−\$0.0M \$0.0M null	\$0 for a real zero; — when the value doesn't apply (a draft order has no variance).
Change	+\$4.0M vs Jul	▲ 4.0 +4.0M	Always signed, always names what it's compared to. No arrows.
Rates · ratios	112.4% · +1.8 pp · 2.6×	112.4032% +1.8% 2.6×	Rates change in percentage points. Coverage and multiples use ×.
Counts	1,271 invoices	1.3K 1271	Exact, with thousands separators and the unit named.
Periods	Aug 2026 · Q3 2026 · Sep MTD	Aug 31/26 8/31/26 latest	Name the period, not its end date. Fiscal quarters match calendar until Finance says otherwise.
Dates · timestamps	2026-09-29 · 17:13 UTC	9/29 5:13pm	ISO dates. Timestamps carry their zone; freshness also shows age ("1h ago").
Currency basis	USD · booking-date rate ¹	€, £, ¥ mixed in one total	Converted totals footnote their rate convention. Local currency only in record-level tables.

Same page, four voices

Decided 2026-09-30: B (Newsreader + IBM Plex Sans + Condensed). A, C, and D are kept only as the record of what was considered. The spec lives on the Type section above.

Committed ARR vs plan, FY26 ①

Committed ARR, USD, month-end · Jan–Aug 2026 · definition ②

Source: fct_arr_monthly · USD at booking-date rate · as of 2026-09-29 17:13 UTC ⑧

- ① **Title**
Metric, split, and comparison. Describes, never interprets. Plex Sans 600, 18px.
- ② **Subtitle**
Metric, unit, grain, period, and a link to the definition.
- ③ **Focus series**
Navy, 2.25px, end dot, labeled at the line end with its latest value.
- ④ **Reference**
Plan, forecast, or prior year: gray, 1.5px, dashed. Variance in status color by meaning.
- ⑤ **Annotation**
Events that explain the shape, written on the chart. Dotted rule, muted text.
- ⑥ **Grid**
Three hairlines at most, sounding-line gray. Baseline in ink; a line chart's baseline may sit above zero when its value is labeled.
- ⑦ **Axes**
Condensed 12px. Unit on the top label only. No axis lines, no ticks.
- ⑧ **Footer**
Source model, currency convention, and freshness. Every chart, every time.

Eight forms

Each form answers one kind of question. If a question isn't on this list, it's a table.

01 Line How has it moved over time?

Four lines at most; one is the focus, the rest are gray context or dashed reference.
One point per closed period. No smoothing, no markers except the last.
May start above zero only when labeled. Bars never may, except signed-bridge anchors (form 04).

03 Stacked bar What is it made of, over time?

Four segments at most, categorical colors in order. Label segments at the last bar, not in a legend.
The segment in focus sits on the baseline, the only one read against zero.
Totals matter more than parts? Use a line of the total with the parts as a small table.

05 Small multiples Which group behaves differently?

Same metric, same scale, same axes in every panel, so the eye compares shape, not numbers.
Twelve panels at most, ordered by value or by a natural grouping. Label panels, not lines.
Highlight only the panel that needs attention. Here, status red, because the verdict is bad.

07 Slope graph Who moved between two periods?

Two periods, many groups. Rank and change read at once, which a grouped bar can't do.
Labels on both ends carry the values; no axis. Change in pp for rates.
The mover is navy; if it's a verdict (quota miss), use status color instead.

02 Horizontal bar How do these compare?

Sort by value, unless categories have a natural order: stages, aging buckets, months.
Values at the bar end replace the axis. Zero baseline in ink, always.
Horizontal so labels read without rotating. Focus bar navy, rest gray.

04 Signed bridge Why did it change?

Opening and closing are anchors, not data to compare by length. The axis starts just below the lowest running total; anchors fade out below it and carry their value on top. Gridlines and \$ labels show the scale is truncated.
Gains in ink, losses in buoy red, opening in muted gray, closing in navy. Movements signed in \$M; anchors labeled as totals.
Categories in a fixed order, the same every month, so bridges compare.

06 Sparkline Which way is it heading?

Table rows only, where each row needs its own history: metric lists, rep lists, monitoring. Never in a KPI tile; the page's charts carry the trend there.
Word-sized. Gray line, end dot in navy tied to the number printed beside it. Add a gray band for plan or normal range when one exists.
Same time span and scale rule for every row in the table, stated in the column header ("Jan–Aug").

08 Actual vs plan Did we hit the number?

Bar is actual, tick is plan. The gap between them is the story, not the bar's length.
Variance labeled in \$ and % of plan, colored by meaning. Inside the metric's materiality band it stays gray.
Sort by variance when the question is "who missed," by size when it's "where's the money."

Always, never

Rules that hold for every form above, including in tooltips and exports.

ALWAYS

Tooltips give the exact value, its period, and its comparison: "\$128.6M · Aug 2026 · −\$2.4M vs plan."

Every chart can export its rows as CSV. The chart is a view of a table, never the only copy.

Meaning survives without color: signs, labels, or position carry it too. Marks hit 3:1 contrast.

Partial periods are drawn hollow or dashed and labeled MTD, never as a closed month.

NEVER

Pies, donuts, gauges, 3D, or radar. Use a bar, a stacked bar, or a single number.

Dual y-axes. Two scales on one frame invent correlations; use two aligned panels.

Legends when a direct label fits. Rotated axis labels: switch to horizontal bars.

A finding in a chart title ("Bookings beat plan through July"). Generated claims go stale or wrong when the data moves; name the chart and let owners' commentary explain it.

Truncated bar axes or gradient fills. One exception: the faded anchors of a signed bridge (form 04). Also never drop shadows, or animation that doesn't carry data.

WHEN TO USE THE BULLET

Only on pages about attainment, where tiles in a row are compared: quota by segment, bookings by team. Few's bullet graph, adapted.

Scale is % of plan, 0–150%, shared by every tile in the row so bars compare. Tick at plan, gray band is the materiality band. The text line carries the verdict color; the bar stays ink.

Reading order is the argument: label and period, the number, the verdict line (vs plan), then context (vs prior period) in muted ink. The answer sits directly under the number.

The verdict line takes status color only outside the metric's materiality band, set in its definition ($\pm 1\%$ for balances like ARR, $\pm 5\%$ for flows like bookings). Inside the band it stays ink.

Partial periods: dashed top rule, MTD tag, muted value, a like-for-like comparison (same day last month), and no verdict color until the period closes.

No sparklines in tiles: the page's charts carry the trend. A missing comparison is stated, never omitted. "No plan set" is itself a finding for Finance.

03 · Variance table

Actual, comparison, and variance for a breakdown. The Finance workhorse: read across a row, down a column.

Net new ARR vs plan by segment, August

Net new ARR by segment, USD · Aug 2026 · materiality ±5%

Segment	Actual	Plan	Variance	% of plan	Variance vs plan
Enterprise	\$2.0M	\$2.4M	−\$0.4M	83%	
Mid-market	\$1.2M	\$1.1M	+\$0.1M	109%	
SMB	\$0.4M	\$0.4M	\$0	100%	
Startups	\$0.3M	\$0.3M	\$0	100%	
Public sector	\$0.1M	\$0.4M	−\$0.3M	25%	
Total	\$4.0M	\$4.6M	−\$0.6M	87%	

No vertical rules, no zebra stripes: hairlines between rows, ink above the total. Units in the subtitle, not every cell.

Plan column muted: it's the reference. Variance and % of plan carry the verdict, colored only outside materiality.

The inline diverging bar lets the eye find the misses without reading; the numbers stay for the reader who needs them.

04 · Caveat marker

Ties a known data-quality issue to the exact number it touches, sized in dollars.

Billings · Aug 2026

\$21.4M¹

¹ Excludes 3 unmatched invoices, \$0.4M (1.9%). Billed without an order; Deal Desk is resolving. See Data quality → backlog.

Amber superscript only when the issue exceeds the metric's materiality band; below it, the note stays in the footer without a marker. Always says what's excluded or included, how much, and who owns the fix.

05 · Metric definition

Opened from any subtitle's "definition" link. One per metric, defined once, versioned with the model.

Committed ARR

Annualized value of recurring order items active at month-end: seats, support, and usage commits. Excludes usage overage and one-time services. USD at the booking-date rate.

Owner	Finance · FP&A
Grain	Billing entity × month-end
Materiality	±1% vs plan
Model	<code>marts.fct_arr_monthly</code>
Tests	Bridge ties out · PASS

06 · Exception worklist

One row per record that needs a human. Deal Desk and RevOps work it top to bottom; the row says what, how late, how much, who, and the next click.

Order exceptions

Quote-to-cash exceptions, USD · sorted by SLA breach, then amount · as of 30 Sep 2026 09:00 UTC

Record	Exception	Age vs SLA	At stake	Owner	Action
Northwind Logistics 006Qx00000A1b2C	Won, no order	9d / 3d	\$412K	M. Okafor	Create order →
Halvorsen Group in_1Q8xR2Lk4mZ	Invoice unmatched to order	6d / 5d	\$186K	J. Reyes	Match invoice →
Kestrel Bio 006Qx00000Z9k1L	Amount ≠ sum of line items	2d / 3d	\$95K	A. Chen	Review quote →
Tidewater Health 801Qx00000B7d4F	Reduction order awaiting approval	1d / 5d	\$240K	M. Okafor	Approve →

Sort is the priority: past SLA first, then dollars. The reader should never have to re-sort to find today's work.

Age bar: the tick is the SLA, the track ends at 1.5× SLA and clips beyond. Red past SLA, amber from 50% of SLA, gray otherwise.

Record ID in mono under the account name so it can be copied into Salesforce or Stripe. The action is one verb, in focus navy, and deep-links to the record.

Empty state is a sentence, not a blank table: "No open exceptions as of 09:00 UTC."

07 · Review-queue row

A candidate duplicate pair for a data steward. Both records side by side, the evidence for and against, the ARR that moves if merged, and one decision.

Account match review queue

Account dedup review queue · same currency, normalized name within 1 edit · ARR in USD · sorted by ARR at stake

Account A	Account B	Signals	ARR at stake	Decision
Meridian Analytics Inc meridian-analytics.com · US 001Qx00000M4r1D	Meridan Analytics meridiananalytics.io · US 001Qx00000M9t7K	For: name 1 edit apart · same country · same billing city Against: different domain	\$310K	Decide →
Brightwater Systems GmbH brightwater.de · DE 001Qx00000B2w8H	Brightwater Systems brightwater.de · NL 001Qx00000B5n2P	For: same domain · names equal after normalizing Against: different country; may be a subsidiary	\$190K	Decide →
Halvorsen Group 001Qx00000H1g6V	Halverson Group 001Qx00000H3k0R	Different companies: separate tax IDs	\$85K	Kept separate A. Dixon · 28 Sep · Undo

Evidence is written out as For and Against, in plain words. No match score: a 0.87 invites rubber-stamping, a sentence invites judgment.

Signals are evidence, not verdicts, so they carry no status color. The steward's decision is the verdict; until then the row is neutral.

ARR at stake is the smaller account's ARR: what moves between customers if merged. Total ARR doesn't change; logo counts, NRR and churn do.

Decided rows stay for 7 days in muted ink with who, when, and Undo. Each decision writes a row to account_match_decisions.

08 · Status chip

The only place status color appears on its own. A dot and a word, never color alone. Used for tests, freshness, SLAs and pipeline runs.

● Pass

Normal state. Gray, so a page of passing checks reads as quiet, and the one failure is the thing you see.

Four states, no more. "Skipped" and "stale" are Warn or Error with a reason, not new colors.

● Warn · 26h, SLA 24h

Past the warn threshold, data still usable. Always states the measured value and the threshold it crossed.

No filled pill backgrounds. A tinted box around every chip turns a status list into a wall of color.

● Error · 3 rows failed

Do not use the affected numbers. Pairs with a caveat marker on every value the failure touches.

Backlog items (known, owned, tracked in dq_backlog) show as Pass with a count, not Warn: they are not incidents.

○ Pending · run started 08:52

No verdict yet. Hollow dot, the same mark as a partial period: not yet complete.

A · DEFAULT STATE: CONTROLS SIT UNDER THE TITLE, LEFT TO RIGHT IN READING ORDER

EXECUTIVE · MONTHLY

Revenue review

Periods, not dates. Named the way Finance names them, grouped by grain, closed first. An in-progress period is shown but routed to the page that owns it.

C · FILTERED: THE SLICE IS STATED, SIZED, AND REMOVABLE

August 2026 · closed ▾

vs Plan ▾

Segment Enterprise ×

Region All ▾

Clear

Showing Enterprise only: 49% of Committed ARR (\$62.4M of \$128.6M).

Enterprise is \$0.4M of the company's \$0.6M net new shortfall. Plan and prior period below are Enterprise-only too.

EVERY SUBTITLE AND TOOLTIP CARRIES IT

Net new ARR by region, USD · Aug 2026 · Enterprise only · materiality ±5%

\$2.0M · Aug 2026 · Enterprise · –\$0.4M vs plan

D · BREAK DOWN INSTEAD OF FILTERING: ONE CLICK TURNS A CHART INTO SMALL MULTIPLES, WHOLE COMPANY STILL IN VIEW

E · DRILL DOWN THE DRIVER TREE; THE SLICE COMES WITH YOU

Executive / Net new ARR / Churn / 2 accounts · Enterprise · Aug 2026

Click a bridge bar, a table row, or a small-multiple panel to go one level down: metric → driver → segment → records. Period, comparison, and filters carry over. The records at the bottom are the same rows that sum to the number at the top.

F · A CLOSED PERIOD IS A SNAPSHOT; CHANGES ARE DISCLOSED

Committed ARR · Jul 2026

\$124.6M¹

1

Restated +\$1.6M (1.3%) since close on 3 Aug: 6 orders arrived after close. As reported at close: \$123.0M. Comparisons use the restated value; the close snapshot stays one click away.

Overview first, then filter

Every page opens unfiltered on the last closed period. Slicing is a second step, never the landing state. (Shneiderman's mantra.)

The slice travels

Stated in every subtitle, tooltip, CSV header, and the URL. A screenshot pasted into a board deck still says "Enterprise only". (Knaflic: context belongs on the visual.)

Compared to what?

A slice never stands alone: the context line sizes it against the whole, and plan and prior period follow the same filter. (Tufte.)

One comparison at a time

"vs Plan / Prior month / Prior year" switches the verdict line on every tile and table at once, as Stripe's comparison range does for its home charts.

Side by side beats flipping

Comparing segments by toggling a filter asks the reader to hold one chart in memory. Break-down shows them at once on a shared scale. (Ware; Tufte's small multiples.)

Active filters look active

Navy border, light navy fill, value in navy, one-click ×. The only place navy fills a control, so a filtered page is visible at a glance. No filter hides behind a menu.

Drill along drivers

Drill paths follow the metric's driver tree (ARR → new, expansion, churn → segment → accounts), not the database schema. (Alexander.)

Closed means closed

Closed periods show restated values with the close snapshot one click away. Restatements outside materiality get a caveat marker; smaller ones go in the footer.

10 · Drill and explain

Three blocks that take a reader from "we're \$2.4M behind" to "because of these accounts, and here's what we're doing about it."

A · DRILL DRAWER: OPENS IN PLACE UNDER THE CHART ROW; THE CLICKED MARK STAYS FULL STRENGTH, THE REST DROP TO 40%

Drill in place

The first level never opens a modal or a new page: the drawer pushes content down and a caret points at the clicked mark, so the chart and its detail are read together (Ware). Deeper levels are break-down, then Salesforce.

Every drawer ties out

The drawer states that its rows sum to the clicked number. If they don't, it shows the gap as a caveat marker. Up to 10 rows, largest first, then "Open all".

Commentary is required

Every variance outside its materiality band gets a named owner, a date, and a why plus what happens next (Alexander). Missing notes show as "Awaiting commentary" with a due date, never as a blank.

Slice-aware

Commentary is stored by metric × slice × period and follows the page filter; drawers show the note for their driver. Movers use one scale for gains and losses, so small losses look small.

Every template

Six rules that hold on every page, whoever the reader, plus the slices each page offers.

The answer is above the fold

At 1440×900, the reader's question is answered without scrolling. Everything below explains or itemizes it.

Summary, then breakdown, then records

Read top to bottom, each band answers "which part?" of the band above. Records come last, or on their own page.

One period per page

One period at a time, chosen in the header's period control and named there. A partial period is shown separately and marked, never blended into a closed one.

At most four KPI tiles

One row, three columns each. A fifth number means one of the four isn't the question.

No tabs over the answer

Filters narrow a page; they never hide its main view. A second question gets a second page.

Caveats and definitions close the page

Footnotes for every caveat marker, then links to each metric definition used above.

Slicing by page

Each page declares its slices up front (component 09). Anything not listed here is not offered on that page.

Page	Periods (default first)	Compare	Filters	Break down by	Drills to
T1 Executive	Last closed month · closed quarters · FY to date	Plan · prior month · prior year	Segment · region	Segment · region	Driver → segment → accounts
T2 Sales	Current quarter to date · prior quarters	Quota · same week last quarter	Segment · team · rep	Segment · team	Stage → opportunities
T3 Deal Desk	Today only	Yesterday	Owner (own queue by default; leads see all) · type · past SLA only	None	Salesforce or Stripe record
T4 Finance	Month in close · closed months	Prior month · close snapshot	Currency · segment	Currency	Reconciling item → orders and invoices
T5 Data health	Now · last 30 days	SLA	Source · model · severity	Model	Test → failing rows

ANSWERS FIRST

Are we on plan, and why did ARR move?

READING ORDER

- 1 Header: period, comparison, filters, freshness
- 2 KPIs: Committed ARR, Net new ARR, NRR, GRR
- 3 ARR vs plan, FY to date · August bridge; break down by segment or region; click to drill
- 4 What moved, and why: owner commentary
- 5 Top movers: 5 largest gains and losses
- 6 Caveats, definitions

NOT ON THIS PAGE

Pipeline, individual deals, test results. Freshness chips in the header are the only data-quality signal; they link to T5.

MODELS

fct_arr_monthly
plan seed (not built yet)
variance_commentary seed (not built yet)

C1 · Page header

Executive · Monthly · "Revenue, August 2026" · closed · freshness chips

C2 · KPI tile

Committed ARR vs plan

C2 · KPI tile

Net new ARR vs plan

C2 · KPI tile

NRR, trailing 12 months

C2 · KPI tile

GRR, trailing 12 months

Primary · Form 01 line (ARR vs plan, FYTD) + Form 04 bridge (August), side by side

Left answers "are we on plan?", right answers "why did it move?". Bars and rows open the drill drawer (C10) in place.

C10 · Variance commentary, then top movers

Owner notes on every variance outside materiality, five largest gains and losses

Fold · 1440×900

C4 footnotes · C5 definition links

ANSWERS FIRST

Will we hit the quarter, and where is pipeline at risk?

READING ORDER

- 1 Header: quarter, week n of 13, vs quota, segment/team/rep filters, freshness
- 2 KPIs (bullet variant): Won QTD, Commit, Best case, each as % of quota
- 3 Forecast call by week vs quota
- 4 Attainment by segment · bookings by month vs quota
- 5 Deals that slipped out of the quarter this week
- 6 Caveats, definitions

NOT ON THIS PAGE

ARR and billings. A deal leaves this page when it closes; after that it belongs to T1.

MODELS

ANSWERS FIRST

Do bookings, orders, and billings tie out for the month?

READING ORDER

- 1 Header: month, open or closed, vs prior month, currency and segment filters, freshness, restatement status
- 2 KPIs: Bookings, Billings, Booked not billed, Unmatched invoices
- 3 Bookings-to-billings bridge, axis from zero
- 4 Reconciliation by currency
- 5 Collections aging (sparkline table) · usage commit burn
- 6 Booked but not billed, vs invoicing SLA
- 7 Caveats, definitions

NOT ON THIS PAGE

Plan variance and ARR movement (T1). Amounts are USD at the booking-date rate; local currency appears only in the reconciliation table.

MODELS

rpt_bookings_to_billings
fct_bookings
fct_billings
DSO / aging model (not built yet)

C1 · Page header

Finance · Month-end close · "Bookings vs billings, August 2026" · closed · freshness chips

C2 · KPI tile

C2 · KPI tile

Booked not billed vs prior month

C2 · KPI tile

Unmatched invoices, \$ and count

Primary · Chart form 04 · Signed bridge

Bookings → not yet billed, reductions, cancellations, billed without order, unmatched → billings.

C3 · Variance table

By currency: booked, ordered, billed (local and USD), difference

Fold · 1440×900

Chart form 03 · Stacked bar

Open receivables by aging bucket (current, 1–30, 31–60, 61–90, 90+), last 6 month-ends. Buckets are ordered, so sequential palette: older = darker.

C6 · Exception worklist

Unbilled and under-billed orders: order, expected vs billed, days since activation, owner

C4 footnotes · C5 definition links

ANSWERS FIRST

Can anyone trust these numbers today?

READING ORDER

- 1 Header: now, last and next run, test totals, source/model/severity filters
- 2 Status grid: one row per source and mart, lineage order, with the pages each feeds
- 3 Open incidents, oldest first vs response SLA
- 4 Backlog: known issues by size and handling rule, no status color
- 5 Test failures, last 30 days, one panel per test family
- 6 Match review queue, pending pairs by ARR
- 7 Definitions: SLAs, severity

NOT ON THIS PAGE

KPI tiles. The status grid is the summary: a count of passing checks answers nothing. Business metrics appear only as \$ affected.

MODELS

dq.dq_test_results
fivetran_log.connector_sync
dq_backlog
account_match_decisions

C1 · Page header

Data · Continuous · "Data health, as of 30 Sep 2026 09:00 UTC" · last run

Primary · Status grid of C8 chips

Rows: Salesforce, Stripe connectors, then each mart, in lineage order. Columns: status, last success, tests, the pages each feeds.

C6 · Exception worklist

Open incidents: test or source, age vs SLA, \$ affected, owner, action

C3 · Table, no variance

Fold · 1440×900

Backlog by issue: rows affected, \$ affected, owner, since. No status color: known and owned.

Chart form 05 · Small multiples

Failing rows per day, last 30 days, one panel per model, shared y-axis

C7 · Review-queue row × 5

Top 5 pairs by ARR at stake, then "All 37 pairs →" to the full queue page

C5 definition links: SLAs, incident vs backlog, severity

Sources and models

Sources and the models the pages read, upstream first · the right column is where each one shows up

Source or model	Status	Last success	Tests passing	Feeds
salesforce Source · Fivetran	● Pass · synced 12m ago, SLA 2h	09:28	6 / 6	Executive · Sales · Deal Desk
stripe Source · Fivetran	● Warn · synced 31h ago, SLA 24h	Tue 02:40	5 / 6	Finance · Deal Desk
fct_bookings Model · mart	● Pass	08:52	24 / 24	Executive · Sales · Finance
fct_billings Model · mart	● Warn · upstream stale (stripe)	08:52	18 / 18	Finance
rpt_bookings_to_billings Model · report	● Error · 3 rows failed JPY amount tie-out	Tue 08:52	11 / 12	Finance · Deal Desk
fct_arr_monthly Model · mart	● Pass	08:52	21 / 21	Executive
fct_pipeline_snapshot Model · mart	● Pass	08:52	16 / 16	Sales

Status on a model is the worst of its own tests and its upstream freshness. Every page that reads a Warn or Error model shows the caveat marker on the affected values.

Open incidents

Warn and Error states with an owner · time open vs the 4-hour response SLA · newest last

Incident	Impact	Open vs SLA	Owner	Action
Stripe sync is 31h stale stripe · source freshness	fct_billings · Finance KPIs carry marker 1	7h / 4h	A. Dixon	Open runbook →
JPY invoices fail the amount tie-out rpt_bookings_to_billings · assert_amount_ties_out	3 rows, \$0.1M · Finance close file blocked	2h / 4h	A. Dixon	View failing rows →

Known issues backlog

dq_backlog seed · each has an owner and a handling rule · none is outside materiality this month

Issue	Size
Invoices missing order metadata Fuzzy-matched on customer and amount; 94% resolve	7% of invoices
Duplicate accounts pending review Review queue below; \$0.5M ARR in top 2	37 pairs
Late-arriving Salesforce rows 21-day lookback on incremental models	1.5% of rows
Won without order Deal Desk worklist, 3-day SLA	4% of won deals

No status color: a backlog item becomes an incident only when it crosses its materiality band.

Test failures by family, last 30 days

Failed tests per day by test family · last 30 days · shared scale, max 3

The 12–13 Sep relationships failures came from a Salesforce sandbox refresh; fixed by A. Dixon on 14 Sep.

Account match review queue

Account dedup review queue · same currency, normalized name within 1 edit · ARR in USD · sorted by ARR at stake

Account A	Account B	Signals	ARR at stake	Decision
Meridian Analytics Inc meridian-analytics.com · US 001Qx00000M4r1D	Meridian Analytics meridiananalytics.io · US 001Qx00000M9t7K	For: name 1 edit apart · same country · same billing city Against: different domain	\$310K	Decide →
Brightwater Systems GmbH brightwater.de · DE 001Qx00000B2w8H	Brightwater Systems brightwater.de · NL 001Qx00000B5n2P	For: same domain · names equal after normalizing Against: different country; may be a subsidiary	\$190K	Decide →
Halvorsen Group 001Qx00000H1g6V	Halverson Group 001Qx00000H3k0R	Different companies: separate tax IDs	\$85K	Kept separate A. Dixon · 28 Sep · Undo

Freshness is checked against each source's loaded-at column on every build. Tests run in dbt; Warn does not block downstream models, Error does. Times are UTC.
